

The population estimate for this bird is >2 million with a 1% threshold of 20,000. Only 1,321 birds were counted in January 95 and 1,464 in 2005.

Tanzania may well hold >20,000 wintering birds but these are scattered across the country in many thousands of small wetlands and as such are difficult to estimate, let alone count.

# Wood Sandpiper

*Tringa glareola*
