A scarce bird that is surely essentially resident in these highland forests but there are few records, even from such well watched sites as the forest edge above Gibbs Farm in the Crater Highlands.

This highland forest bird is the race *C. q. martini*.

Birds in the lowland Minziro FR on the Ugandan border are also *martini* while claims from Miombo woodland SW of Lake Victoria may be ID errors.

To the south the race *C. q. muenzneri* was only known from the Ulugurus and Mahenge (red dot) but there are now records from the Udzungwa mts and, if confirmed, these odd claims from the South Pares, Ngurus and in Miombo woodland NE of Songea may also belong here.

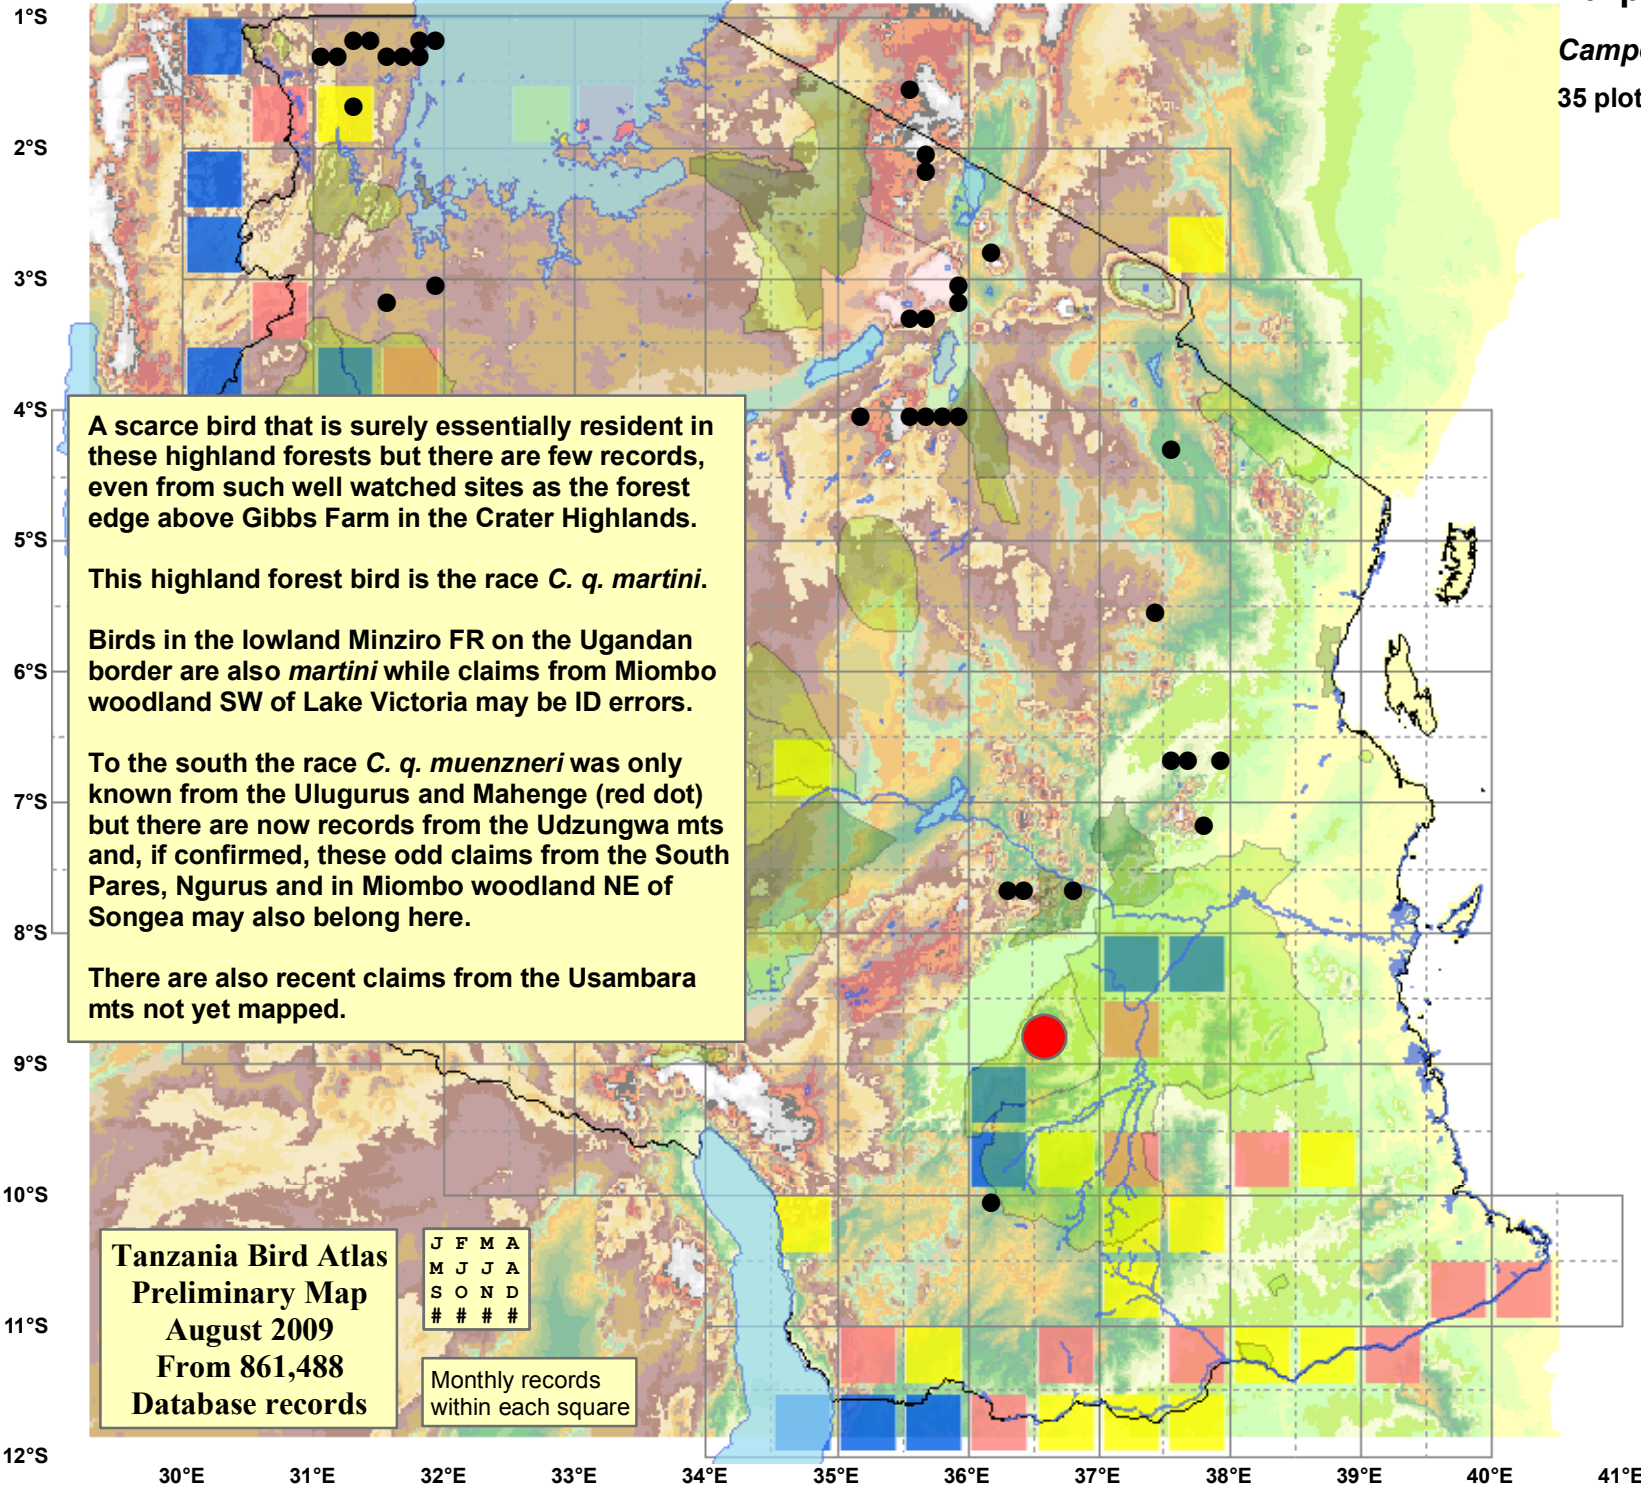

There are also recent claims from the Usambara mts not yet mapped.
